

A method of recording information exchanged between telecommunications devices, a method of prohibiting such recording, telecommunications devices for exchanging information, and an electronic accessory device connectable to a telecommunications device

ABSTRACT

In a method of recording information exchanged between first (1; 22) and second (5) telecommunications devices, the recording is performed under control of the first telecommunications device. The method comprises the steps of sending from the first telecommunications device (1; 22) to the second telecommunications device (5) a message requesting authorisation for the recording, and performing the recording only if a responding message giving the authorisation is received by the first telecommunications device (1; 22) in response to the requesting message. In this way the remote party is ensured that the telephone conversations are not recorded without his knowledge and permission, and the different national laws concerning voice recording can be complied with.
